Java, Python, Kotlin, C++, JavaScript

AOSP, Claude Code, Django,

PostgreSQL, AWS

EXPERIENCE

META New York, NY

Apr 2025 - May 2025

Software Engineer, Resource Accounting Infrastructure

- Maintained core data ingestion frameworks and aggregation pipelines for **60+** internal Meta platforms
- Designed and implemented VRT Metadata Migration, which **increased data accuracy** of aggregation pipelines **by 3.2%**, leading to cost reduction and efficiency wins for budgeting server resources
- Developed a **Claude Agent** for oncall, **reducing noise by 20%** and **time-to-resolution by 60%**
- Designed and implemented an end-to-end SLO/SLI observability framework across major pipeline components, improving debuggability and reducing oncall fatigue

GOOGLE Mountain View, CA

Oct 2018 - Mar 2025

Software Engineer, Android Automotive OS - Communication Apps

- Led technical execution as **tech lead** of messaging and calling experiences for **Android Automotive OS**, developing reference applications, libraries, and APIs to support first and third party app development
- Secured a defensive patent (**IDF-319485**, **Dpub-302175**) for Alternative Dialer Controls, a critical safety feature **enabling all** third-party calling apps to be distributed on the Google Play Store
- Collaborated across functional teams to audit and design message privacy controls, ensuring compliance and resolving user data privacy concerns
- Refactored the entire Messenger app, leading to **99% reduction** of ANRs and bug fixes impacting core messaging across bluetooth, platform, and application stacks
- Unbundled Dialer and Messenger apps from the platform, allowing OEMs to provide over the air updates through Google Play Store
- Developed a seamless phone-to-car notification passthrough protocol, improving user transition and continuity when entering a vehicle
- Developed voice assistant integrations for Car App Library, enabling hands free communication controls to improve driver safety

A THINKING APE Software Engineer Intern, Live Ops

Sept 2017 - Dec 2017

- Fullstack **Android** and **iOS** game development with **Django** and **Redis** backend

AGARI DATA Data and Pipeline Engineer Intern

Jan 2017 - Apr 2017

- Architected and developed data pipelines with **AWS API Gateway**, **Lambda**, **Kinesis**, and **Terraform**

KIK INTERACTIVE Anti-Spam Developer Intern

May 2016 - Aug 2016

- Realtime spam detection with **Apache Samza**, **Hadoop Yarn**, **Apache Kafka**, and **Amazon Redshift**

PROJECTS

TIMEWINDER.GG League of Legends data analytics platform

2018

- **Front page of reddit.com/r/leagueoflegends**, acquiring **220,000** page views and **40,000** users internationally and **featured on polscygracze.pl**, one of the largest Polish gaming blog and news outlets
- Architected aggregation pipelines and developed with **React**, **Django**, **PostgreSQL**, **d3.js**, **Charts.js**, **AWS**

MAPLESTORY BOT Fully automated trainer for MapleStory

2025

- Integrated **YOLOv8 computer vision** for realtime object detection and implemented hardware level HID emulation using **Raspberry Pi** to circumvent anti-cheat mechanisms

EDUCATION

UNIVERSITY OF WATERLOO Bachelor of Software Engineering

2013 - 2018
